

BBP::userspace::HyperVisor
::FetchActiveThreadInstruction

BBP::userspace::lvalue
::resolve

BBP::userspace::readRegister

```
graph LR; A[BBP::userspace::HyperVisor::FetchActiveThreadInstruction] --> C[BBP::userspace::readRegister]; B[BBP::userspace::lvalue::resolve] --> C;
```

The diagram illustrates a control flow or dependency. Two source functions, 'BBP::userspace::HyperVisor::FetchActiveThreadInstruction' and 'BBP::userspace::lvalue::resolve', are shown on the left. Arrows from both point to a single target function, 'BBP::userspace::readRegister', which is highlighted with a gray background. The target function is positioned to the right of the source functions.
